Administration manual

TicTacToe

Introduction

This manual will go through how to deploy, run and maintain this web application. The app will be running on Heroku.

Set up Git

To install git:

        $ apt-get install git

Next to need to clone the repository. To do this you first need to open the terminal, find a good location for the repository and write the following line:

        git clone git@github.com:VidTech/LeyniRepo.git

Set up Java

Need this to install java:

        $ sudo apt-get install openjdk-7jdk

Set up Heroku

1. Register with Heroku here: https://signup.heroku.com/www-header
2. Install Heroku toolbelt with this command:
        $ wget -qO- https://toolbelt.heroku.com/install-ubuntu.sh | sh
3. Set up ssh connection:
        $ heroku login
        $ git init
        $ heroku git:remote -a <your username>
4. Create a heroku app:
        $ heroku create <name of your app>

Your app will be hosted on <name of your app>.herokuapp.com

Set up CI on Travis

1. Using your Github access, sign up for Travis CI.
2. Go to https://travis-ci.org/profile/<username> and flick the switch to on.
